

The Weekly Times.

THURSDAY, JULY 12, 1888.

TOO MUCH ASSUMPTION.

The free trade assumption, though free trade would reduce wages, prices would be much lower than at present, and so the workingman would be well off as he is now, not better off.—Hamilton Spectator.

Upon this basis, or on any other proceeds to build an argument to the effect that the reduction of wages would do the workingman more harm than the decrease of the price of goods would do him good. There is really no occasion to debate that question. The premises are wrong. Free traders do not assume that free trade would reduce wages. On the contrary they contend that free trade would increase wages, and they appeal to both history and reason in support of that contention. Suppose that money wages remained the same, and that the removal of import duties simply caused prices of commodities to fall, the change would be equivalent to an increase of the wages of labor. The man earning \$1 a day could support his family much more comfortably with sugar at 5 cents a pound, cotton at 5 cents a yard and chairs at 50 cents a dozen than with those commodities ranging at 7, 8 and 70 cents respectively. Man does not work for money, but for the things that money will buy. As soon as he gets his daily bread, he goes and trades off the money for things that he wants more than he wants the money, and the more of those things he can get for a given amount of money the better off he is.

Free trade does not make wages low. Its adoption did not have that effect in England. During the years 1821 to 1840, when wheat was protected in England, its average price was 5s. a quarter, while agricultural laborers averaged 15s. a week. Free trade brought the price of wheat down to 4s. a quarter, and the wages of agricultural laborers averaged 16s. a week. During the years 1866 to 1880, under free trade, the price of wheat averaged 5s. a quarter, while agricultural laborers averaged 16s. a week. A comparison of relative wages in other occupations tells the same story—that money wages increased as prices of commodities decreased. The employer does not pay higher wages because tariffs enable him to demand higher prices for his goods. In the London Times of December 22, 1848, there appeared this description of how tenant farmers and laborers were getting along under protection: "The small farmer here breakfasts on oatmeal and water, boiled, called 'duffery' or 'flummery' or 'on a' and a bit of butter. From the previous day he had a dinner of potatoes and butter, with sometimes a little Welsh cheese and barley bread, and as an occasional treat, has a salt herring. Fresh meat is never seen on the table. His eggs on mashed potatoes. His butter he never tastes; he sells it to pay his rent. The pigs he feeds are sold to pay his rent. As for beef or mutton, they are quite out of the question—they are eaten by the farmer's family. Is not this a mutilating of the ox which treadeth out the corn? The condition of the laborer, from inability in the farmer to give him constant employment, is deplorable. They live entirely on potatoes, and have seldom any other, having only one meal a day. Being half starved they are constantly upon the parish. They live in mud cottages, with only one room for sleeping, cooking and living—different ages and sexes herding together. Their cottages have no windows, but a hole through the wall to admit the air and light, into which a bundle of rag or turf is thrust at night to stop it. The thin thatched roofs are seldom dry, and the mud floor becomes consequently damp and wet and dirty almost as soon as the road, as to complete the wretched picture, huddled in a corner are the rags and straw of which their beds are composed."

Free trade has certainly not made that condition any worse in Great Britain. So much for a comparison of two periods in the same country. Now compare two countries in the same period. According to a table published during the Presidential campaign of 1880 in the United States, the average weekly wages in fifteen employments in free trade England were \$7.07, compared with an average of \$8.64 in the same employments in protectionist Germany. The products of the low-priced German labor were admitted free of duty into England, yet their importation did not tend to reduce English wages to the German level.

Now take another view. In 1868 the Canadian tariff was reduced from 30 per cent. to 15 per cent., yet wages did not fall in Canada, nor was there any great increase among manufacturers. In 1870 the tariff was increased, and it has been gradually going up ever since, yet wages have not risen. The moulder does not now get any more money for making each shoe than he got ten years ago, and he has fewer shoes to make now than he had then; in other words, his employment is less steady; he has more enforced holidays. The same is true of other occupations. The cotton mills shut down at intervals to restrict production, and, by creating a scarcity, raise prices. The consuming public buy fewer goods at high prices than they would buy at low prices, and the demand for goods being reduced employment must be scarce. The result is that the falling off in yearly wages is greater than the falling off in daily wages, yet a man has to eat 365 days in the year.

Dr. Trench, who has been Deputy Minister of Agriculture since 1864, has been superannuated by the Dominion Government. His successor is Mr. John Lowe, Secretary to the Department. Mr. Lowe is 64 years of age. The office is worth \$8,000 a year and a lifetime.

Our telegrams this afternoon convey the intelligence that Professor Otto Lueger, entomologist of the Minnesota Experimental station, has returned from the scene of the devastations of the grasshopper, and that in all probability the further progress of the pestiferous marauders has been stayed. These visitations of the Rocky Mountain grasshopper seem to occur in 17-year cycles. The last disastrous attack on the crops of the farmers was in 1871, the prior visit occurring in 1854, before that in 1838, but prior to the last-named date no record was kept. About a month since, Professor Lueger was called to Otter Tail County, Red River Valley, about 120 miles from the Manitoba border. There he found immense numbers of Rocky Mountain locusts hatching out and nearly ready to do great damage. Further inquiry revealed the fact that for nearly 100 square miles in that vicinity the pests were hatching. Dr. Lueger immediately appealed to the provincial government, and the result was that the farmers were organized, and the tradespeople in the towns induced to shut up their places of business for half the day, so great were the fears that unless the locusts were exterminated they would be the ruin of the State.

The British Privy Council has refused to allow the appeal of Mr. Donald Macdonald against the decision of the Dominion Supreme Court, which judgment Mr. Macdonald secured as M. P. for Glenagry. Lord Hobhouse, in giving judgment on behalf of himself and three other judges, said there were strong reasons why such an order should be made within the Council, and why the prerogative of the Crown should not be extended to matters over which it had no power. Their Lordships could not advise Her Majesty to grant the appeal, and the judgment was dismissed with costs, which will be very heavy. When the case was first argued, a few days ago, it was made pretty plain that the defeated Tory candidate for Glenagry had no legitimate plea with which to go before the Privy Council. Sir Barnes Peacock rendered the legal aspect of the question clear when he asked:

"If counsel for Her Majesty should recommend Her Majesty to reverse the judgment of the Supreme Court, it would be to say that 'Her Majesty has no prerogative to grant the appeal, and the judgment was dismissed with costs, which will be very heavy.' It would not be a very prudent thing for us to advise Her Majesty to do that, unless we can see our way to having it carried into effect. It would be to say that 'Her Majesty has no prerogative to grant the appeal, and the judgment was dismissed with costs, which will be very heavy.' It would not be a very prudent thing for us to advise Her Majesty to do that, unless we can see our way to having it carried into effect."

Judgment has been given in accordance with these views, and the Macdonalds and his friends will have to pay the shot. It is significant that this Tory legal light, who opposes the Inter-Provincial resolutions in favor of placing the vote power on the local legislation in the hands of the Privy Council, should be so anxious to have their Lordships stretch their power beyond precedent in his own favor.

Ten managers of the Montreal Elevating Company, complaining that grain is passing through the elevators, says that "the newspapers do not help us, but rather they work for reciprocity." He must believe that, under free trade, more United States grain would be shipped through Montreal than Canadian grain would be shipped through the United States. It is true that grain can be shipped from either country through the other in bond, but bonding is after all not so good as free trade. Canada built canals to permit the passage of United States grain and make a profit by handling it, and then proceeded to put on duties to turn the grain to another route. She built canals to ship the grain to the United States, and then put on duties to keep the foreign goods out. She bought the Northwest to provide homes for British farmers, and then put such heavy duties on farmers' supplies that the farmers couldn't be induced to settle in the Northwest. Isn't this for the era of contradictions to end?

Sir States will hold elections prior to the Presidential contest in November, but as none of the States are deemed doubtful the results will be of little moment as affecting the national contest, except, as in a measure, tending to show whether the two parties are gaining or losing strength in Tennessee will elect a Governor on Thursday, Aug. 2nd. Alabama will hold its biennial election on the first Monday in August. The Arkansas State election will be held on the first Monday in September. The Georgia State election will be held on the first Tuesday in September. Maine follows with an election on the second Monday in September. Georgia will hold an election on the first Wednesday in October. The probability is that the Democrats will be victorious in all of these elections except in Vermont and Maine.

It is announced from Ottawa that Dr. Monaghan will not go on the two months' trip through the Maritime Provinces with Minister Chaplain for which he was booked. The report, which was from a Tory source, says a "press of private business" prevented the doctor of Hamilton from undertaking the trip. What is the Dunville man up to now?

Our telegrams this afternoon convey the intelligence that Professor Otto Lueger, entomologist of the Minnesota Experimental station, has returned from the scene of the devastations of the grasshopper, and that in all probability the further progress of the pestiferous marauders has been stayed. These visitations of the Rocky Mountain grasshopper seem to occur in 17-year cycles. Dr. Lueger immediately appealed to the provincial government, and the result was that the farmers were organized, and the tradespeople in the towns induced to shut up their places of business for half the day, so great were the fears that unless the locusts were exterminated they would be the ruin of the State.

The British Privy Council has refused to allow the appeal of Mr. Donald Macdonald against the decision of the Dominion Supreme Court, which judgment Mr. Macdonald secured as M. P. for Glenagry. Lord Hobhouse, in giving judgment on behalf of himself and three other judges, said there were strong reasons why such an order should be made within the Council, and why the prerogative of the Crown should not be extended to matters over which it had no power. Their Lordships could not advise Her Majesty to grant the appeal, and the judgment was dismissed with costs, which will be very heavy. When the case was first argued, a few days ago, it was made pretty plain that the defeated Tory candidate for Glenagry had no legitimate plea with which to go before the Privy Council. Sir Barnes Peacock rendered the legal aspect of the question clear when he asked:

"If counsel for Her Majesty should recommend Her Majesty to reverse the judgment of the Supreme Court, it would be to say that 'Her Majesty has no prerogative to grant the appeal, and the judgment was dismissed with costs, which will be very heavy.' It would not be a very prudent thing for us to advise Her Majesty to do that, unless we can see our way to having it carried into effect. It would be to say that 'Her Majesty has no prerogative to grant the appeal, and the judgment was dismissed with costs, which will be very heavy.' It would not be a very prudent thing for us to advise Her Majesty to do that, unless we can see our way to having it carried into effect."

Judgment has been given in accordance with these views, and the Macdonalds and his friends will have to pay the shot. It is significant that this Tory legal light, who opposes the Inter-Provincial resolutions in favor of placing the vote power on the local legislation in the hands of the Privy Council, should be so anxious to have their Lordships stretch their power beyond precedent in his own favor.

Ten managers of the Montreal Elevating Company, complaining that grain is passing through the elevators, says that "the newspapers do not help us, but rather they work for reciprocity." He must believe that, under free trade, more United States grain would be shipped through Montreal than Canadian grain would be shipped through the United States. It is true that grain can be shipped from either country through the other in bond, but bonding is after all not so good as free trade. Canada built canals to permit the passage of United States grain and make a profit by handling it, and then proceeded to put on duties to turn the grain to another route. She built canals to ship the grain to the United States, and then put on duties to keep the foreign goods out. She bought the Northwest to provide homes for British farmers, and then put such heavy duties on farmers' supplies that the farmers couldn't be induced to settle in the Northwest. Isn't this for the era of contradictions to end?

Sir States will hold elections prior to the Presidential contest in November, but as none of the States are deemed doubtful the results will be of little moment as affecting the national contest, except, as in a measure, tending to show whether the two parties are gaining or losing strength in Tennessee will elect a Governor on Thursday, Aug. 2nd. Alabama will hold its biennial election on the first Monday in August. The Arkansas State election will be held on the first Monday in September. The Georgia State election will be held on the first Tuesday in September. Maine follows with an election on the second Monday in September. Georgia will hold an election on the first Wednesday in October. The probability is that the Democrats will be victorious in all of these elections except in Vermont and Maine.

It is announced from Ottawa that Dr. Monaghan will not go on the two months' trip through the Maritime Provinces with Minister Chaplain for which he was booked. The report, which was from a Tory source, says a "press of private business" prevented the doctor of Hamilton from undertaking the trip. What is the Dunville man up to now?

Our telegrams this afternoon convey the intelligence that Professor Otto Lueger, entomologist of the Minnesota Experimental station, has returned from the scene of the devastations of the grasshopper, and that in all probability the further progress of the pestiferous marauders has been stayed. These visitations of the Rocky Mountain grasshopper seem to occur in 17-year cycles. The last disastrous attack on the crops of the farmers was in 1871, the prior visit occurring in 1854, before that in 1838, but prior to the last-named date no record was kept. About a month since, Professor Lueger was called to Otter Tail County, Red River Valley, about 120 miles from the Manitoba border. There he found immense numbers of Rocky Mountain locusts hatching out and nearly ready to do great damage. Further inquiry revealed the fact that for nearly 100 square miles in that vicinity the pests were hatching. Dr. Lueger immediately appealed to the provincial government, and the result was that the farmers were organized, and the tradespeople in the towns induced to shut up their places of business for half the day, so great were the fears that unless the locusts were exterminated they would be the ruin of the State.
